

Product Revision Notice: Globally Certified Cable Color is Changed for ELG/HLG Family

2018/10/02

The globally certified cable color is changed into black and red for ELG/HLG family as well as the dimming cable color is changed into blue and white. Since 2017, the globally certified cables were adopted by ELG/HLG family, which not only reduce the inconvenience of stock and cost management caused by the restrictions of safety regulations and cables differences, but enlarge the product selling areas.

Due to the issue of safety regulations, the color of the input/output cables is brown and blue with black and red heat shrink tube at the beginning. However, now, red and black globally certified cables are available with safety approval. Thus, MEAN WELL is thrilled to announce that the black and red globally certified cables are officially adopted by the ELG/HLG family. Moreover, the dimming cable color is changed into (UL 2517 20#) blue and white.

The following standard LED Driver series are revised to the new version after the production dated 2018/8/21 (production lot: W1809B.) For more information, please refer to the table below). MEAN WELL fully takes in any relevant cost, making no adjustment on the pricing. Should there be any questions, please refer to the updated specification on the website or contact MEAN WELL sales representatives.
